Regn No : 401965885 Age / Sex : 16 Years / Male

Ref By : Dr. RAM NARSIMHA Regn Centre : Molarband

Sample Type : Serum Ref no.

### **DENGUE (SPOT)**

TEST NAME RESULT

Dengue IgG Antibodies : Positive

Method: Immuno - Chromatography

Dengue IgM Antibodies : Positive

Method: Immuno - Chromatography

NS1 Antigen : Positive

Method: Immuno Chromatography

Note: Positive test rule out dengue infection. If highly suspicious, repeat the test after 3 to 4 days.

#### Clinical Significance:

\_\_\_\_\_

- 1. The Presence of IgG antibodies indicate immunity or prior exposure.
- 2. The presence of IgM indicates recent infection.
- 3. Presence of both IgG & IgM indicates secondary infection.
- 4. Cross reactions may occur with other members of flaviviridae family
- 5. This is only a screening test and the diagnosis of acute dengue infection is to be confirmed by an IgM capture ELISA.
